

# Bootstrapping the open data ecosystem

Dr. Rufus Pollock

Fellow in Economics  
University of Cambridge

Director  
Open Knowledge Foundation

We are living in a digital age.

# Technological Explosion

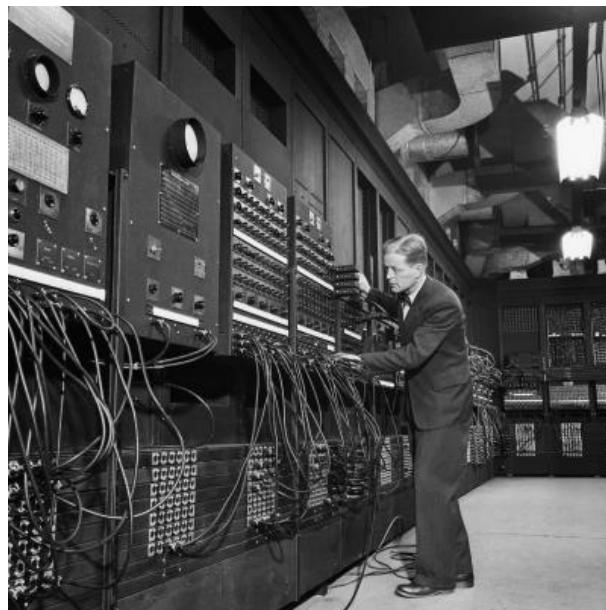

Powerful computers, cheap storage  
global communication networks

A shared ecosystem of data?

# Social and Commercial Benefits

Life-saving drugs,  
improved public services,  
increased access to cultural and  
educational materials ...

# From books to bits...

But We're Still Working  
Out the Details!

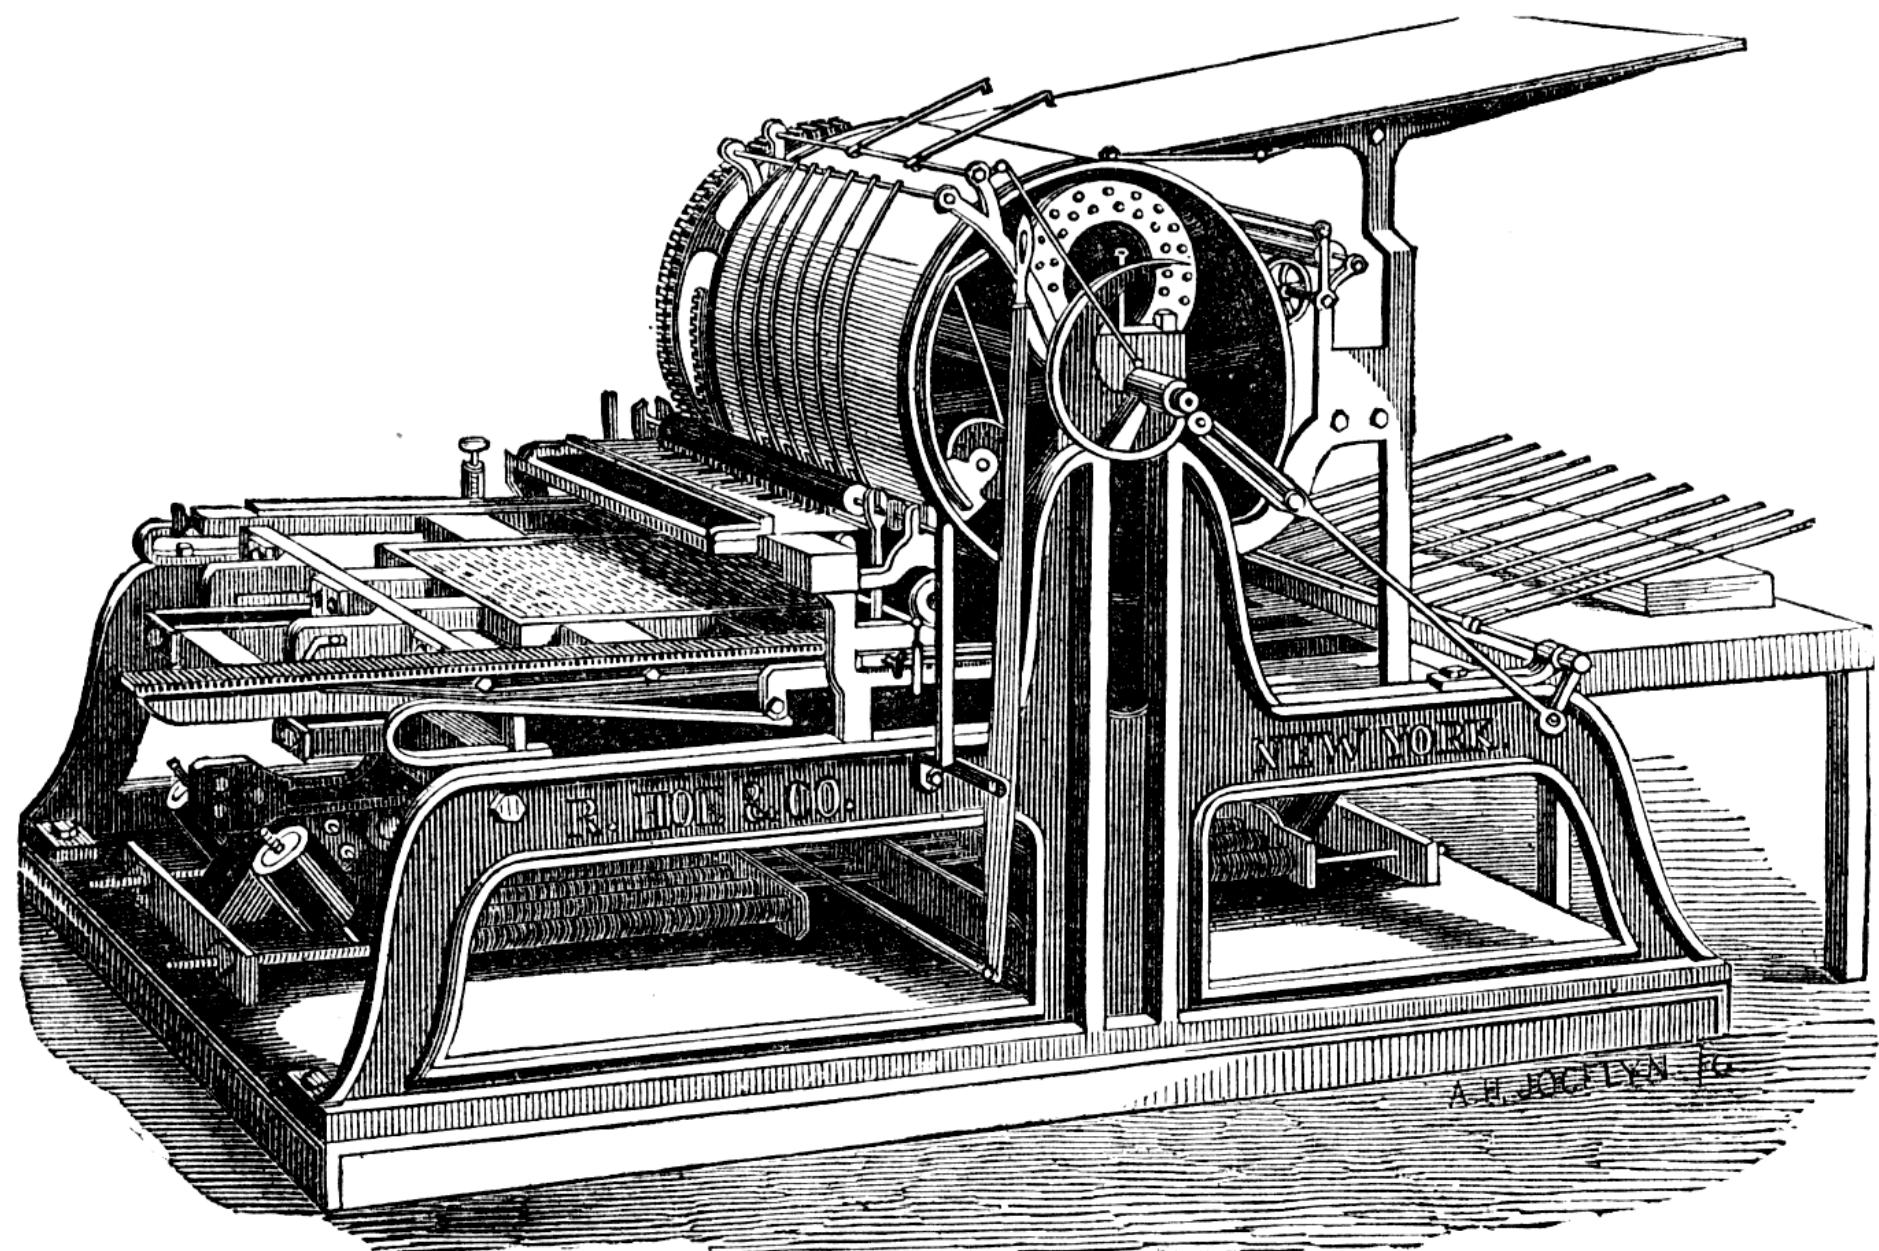

ONLINE  
≠  
OPEN

T500

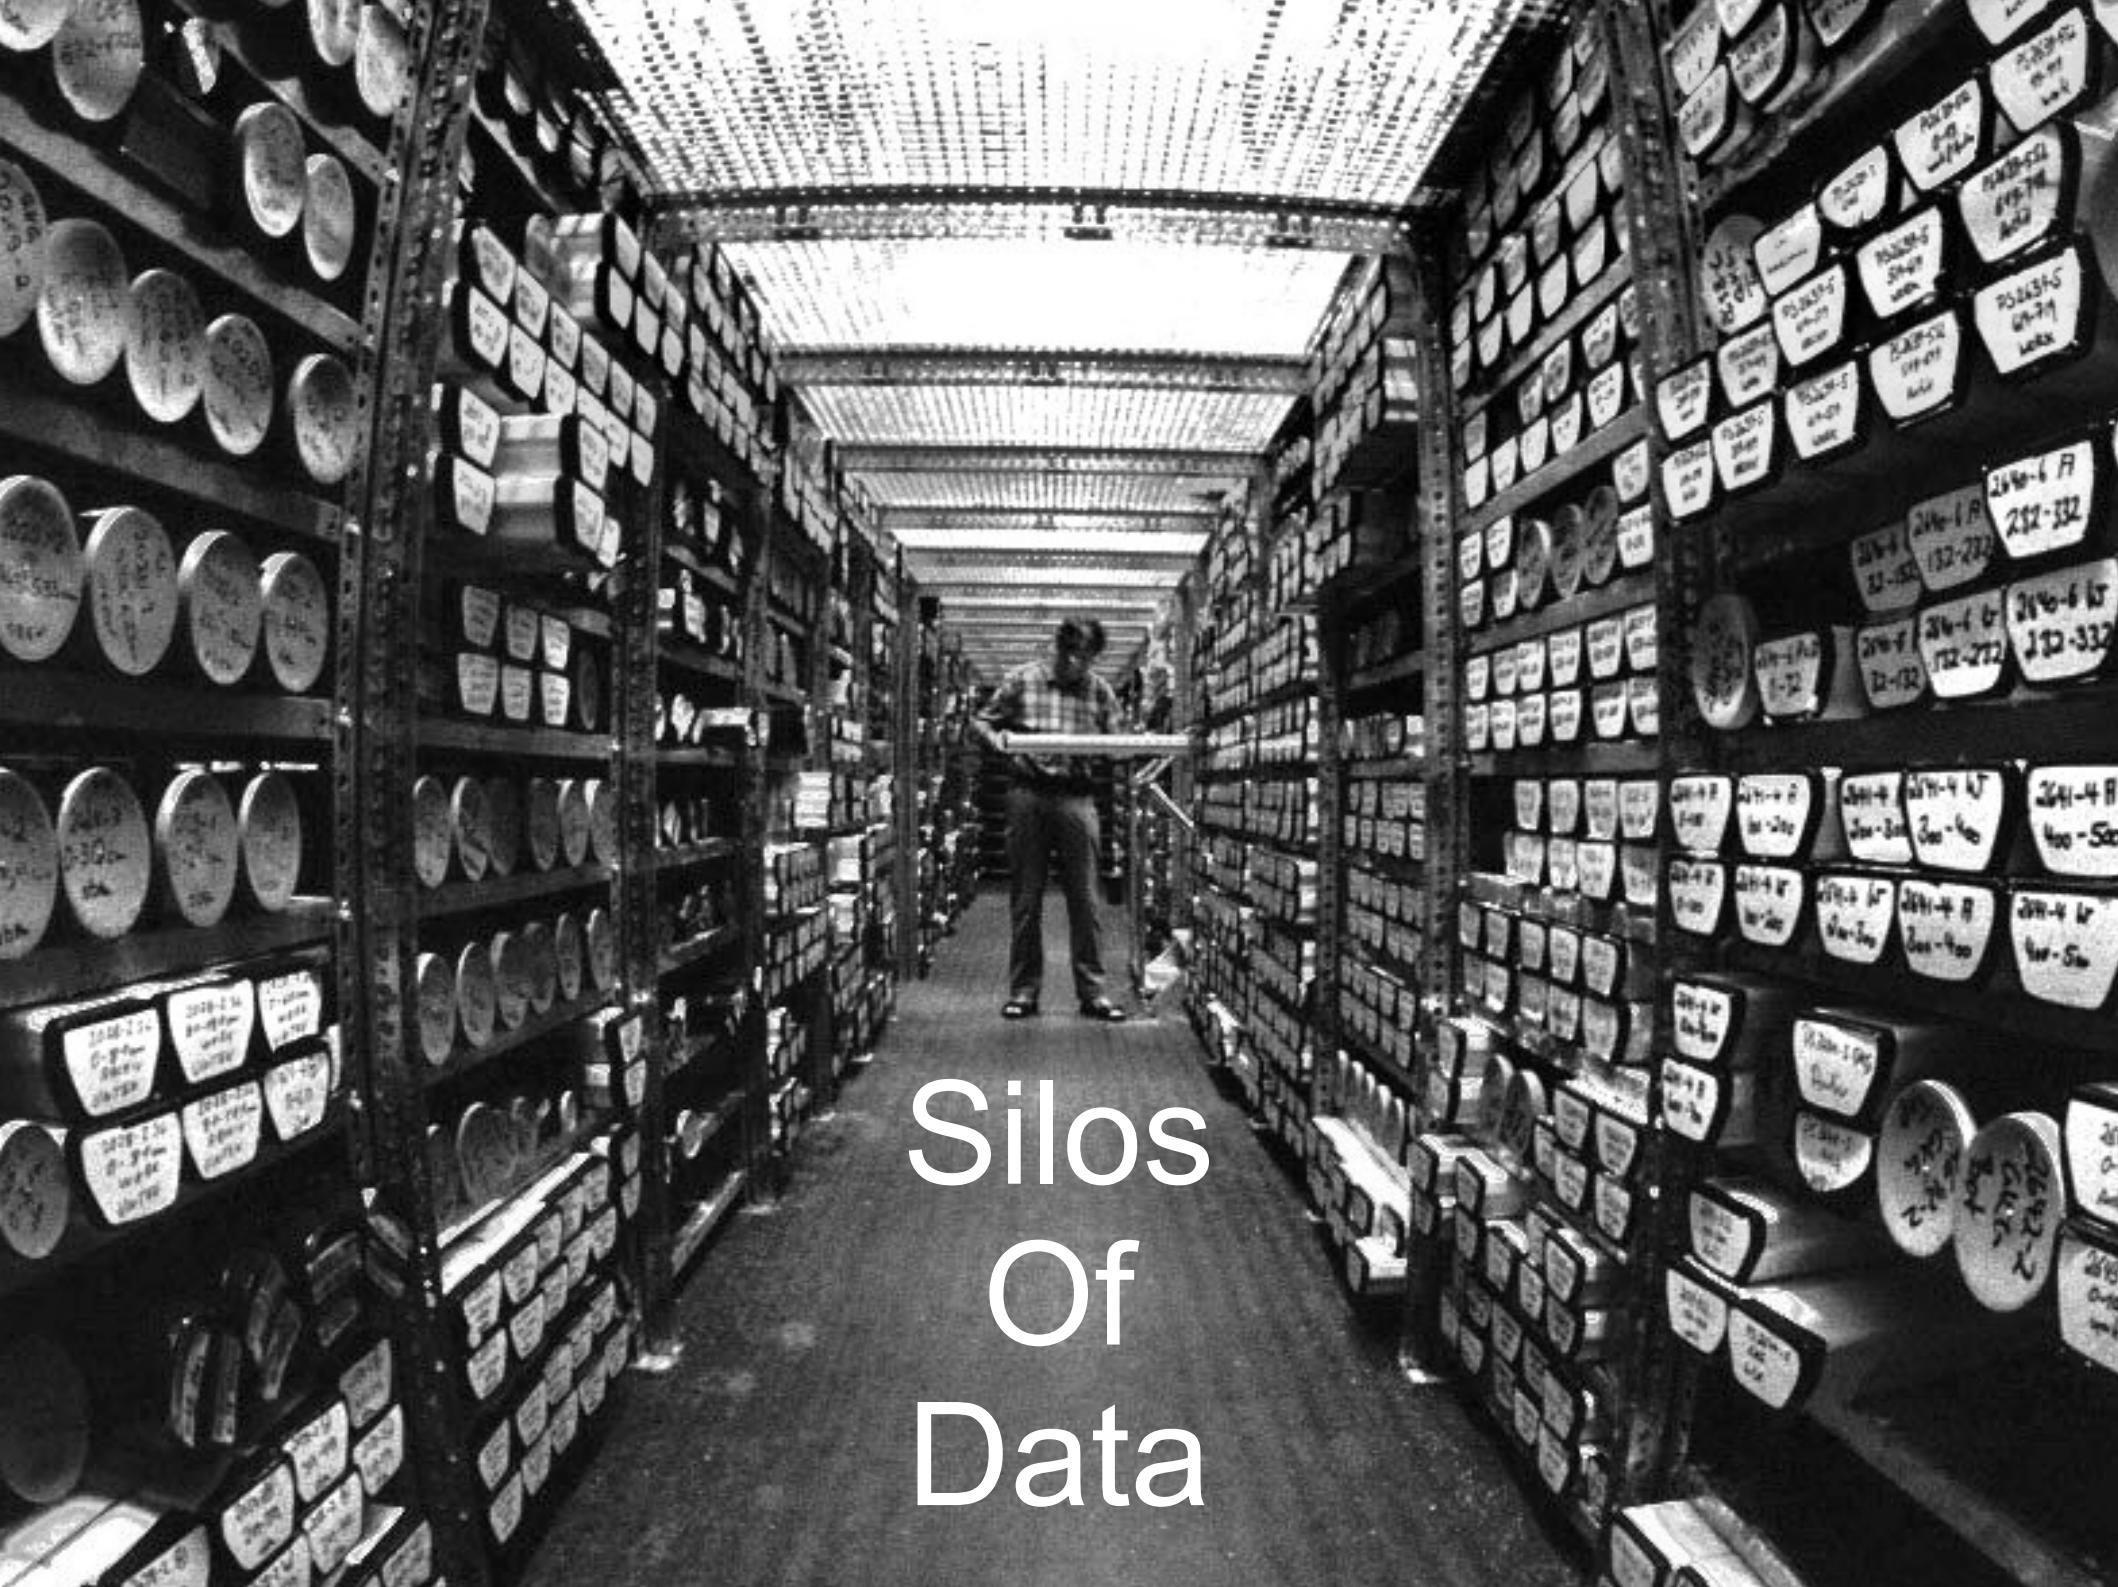

lenovo

# Copyright and IP Law

HOE'S ONE-CYLINDER PRINTING PRESS.

# Silos Of Data

# open knowledge

=

any content or data that anyone is free  
to use, reuse or redistribute

All forms of content and data

From sonnets to statistics,  
genes to geodata...

# Some familiar names...

Wikipedia / Wikimedia Projects

Open Street Map

Flickr Commons

Freebase

Geonames

Dbpedia

Project Gutenberg / Runeberg

Librivox

MusicBrainz

Internet Archive / Open Library

Connexions

... and many many more!

# Confusing Signals

aldridge  
traffic  
systems

The best thing to do  
with your data will  
be thought of by  
someone else!

Technically Open  
(As well as legally open)

# Shiny PDFs and Shiny Front-Ends Aren't What We Want

“Raw Data Now!”

The background of the slide features a vibrant, abstract geometric pattern composed of numerous small, translucent colored squares and rectangles. These shapes are arranged in a way that creates a sense of depth and motion, resembling a digital or architectural space. The colors used include shades of yellow, orange, red, green, blue, and purple, all set against a white background.

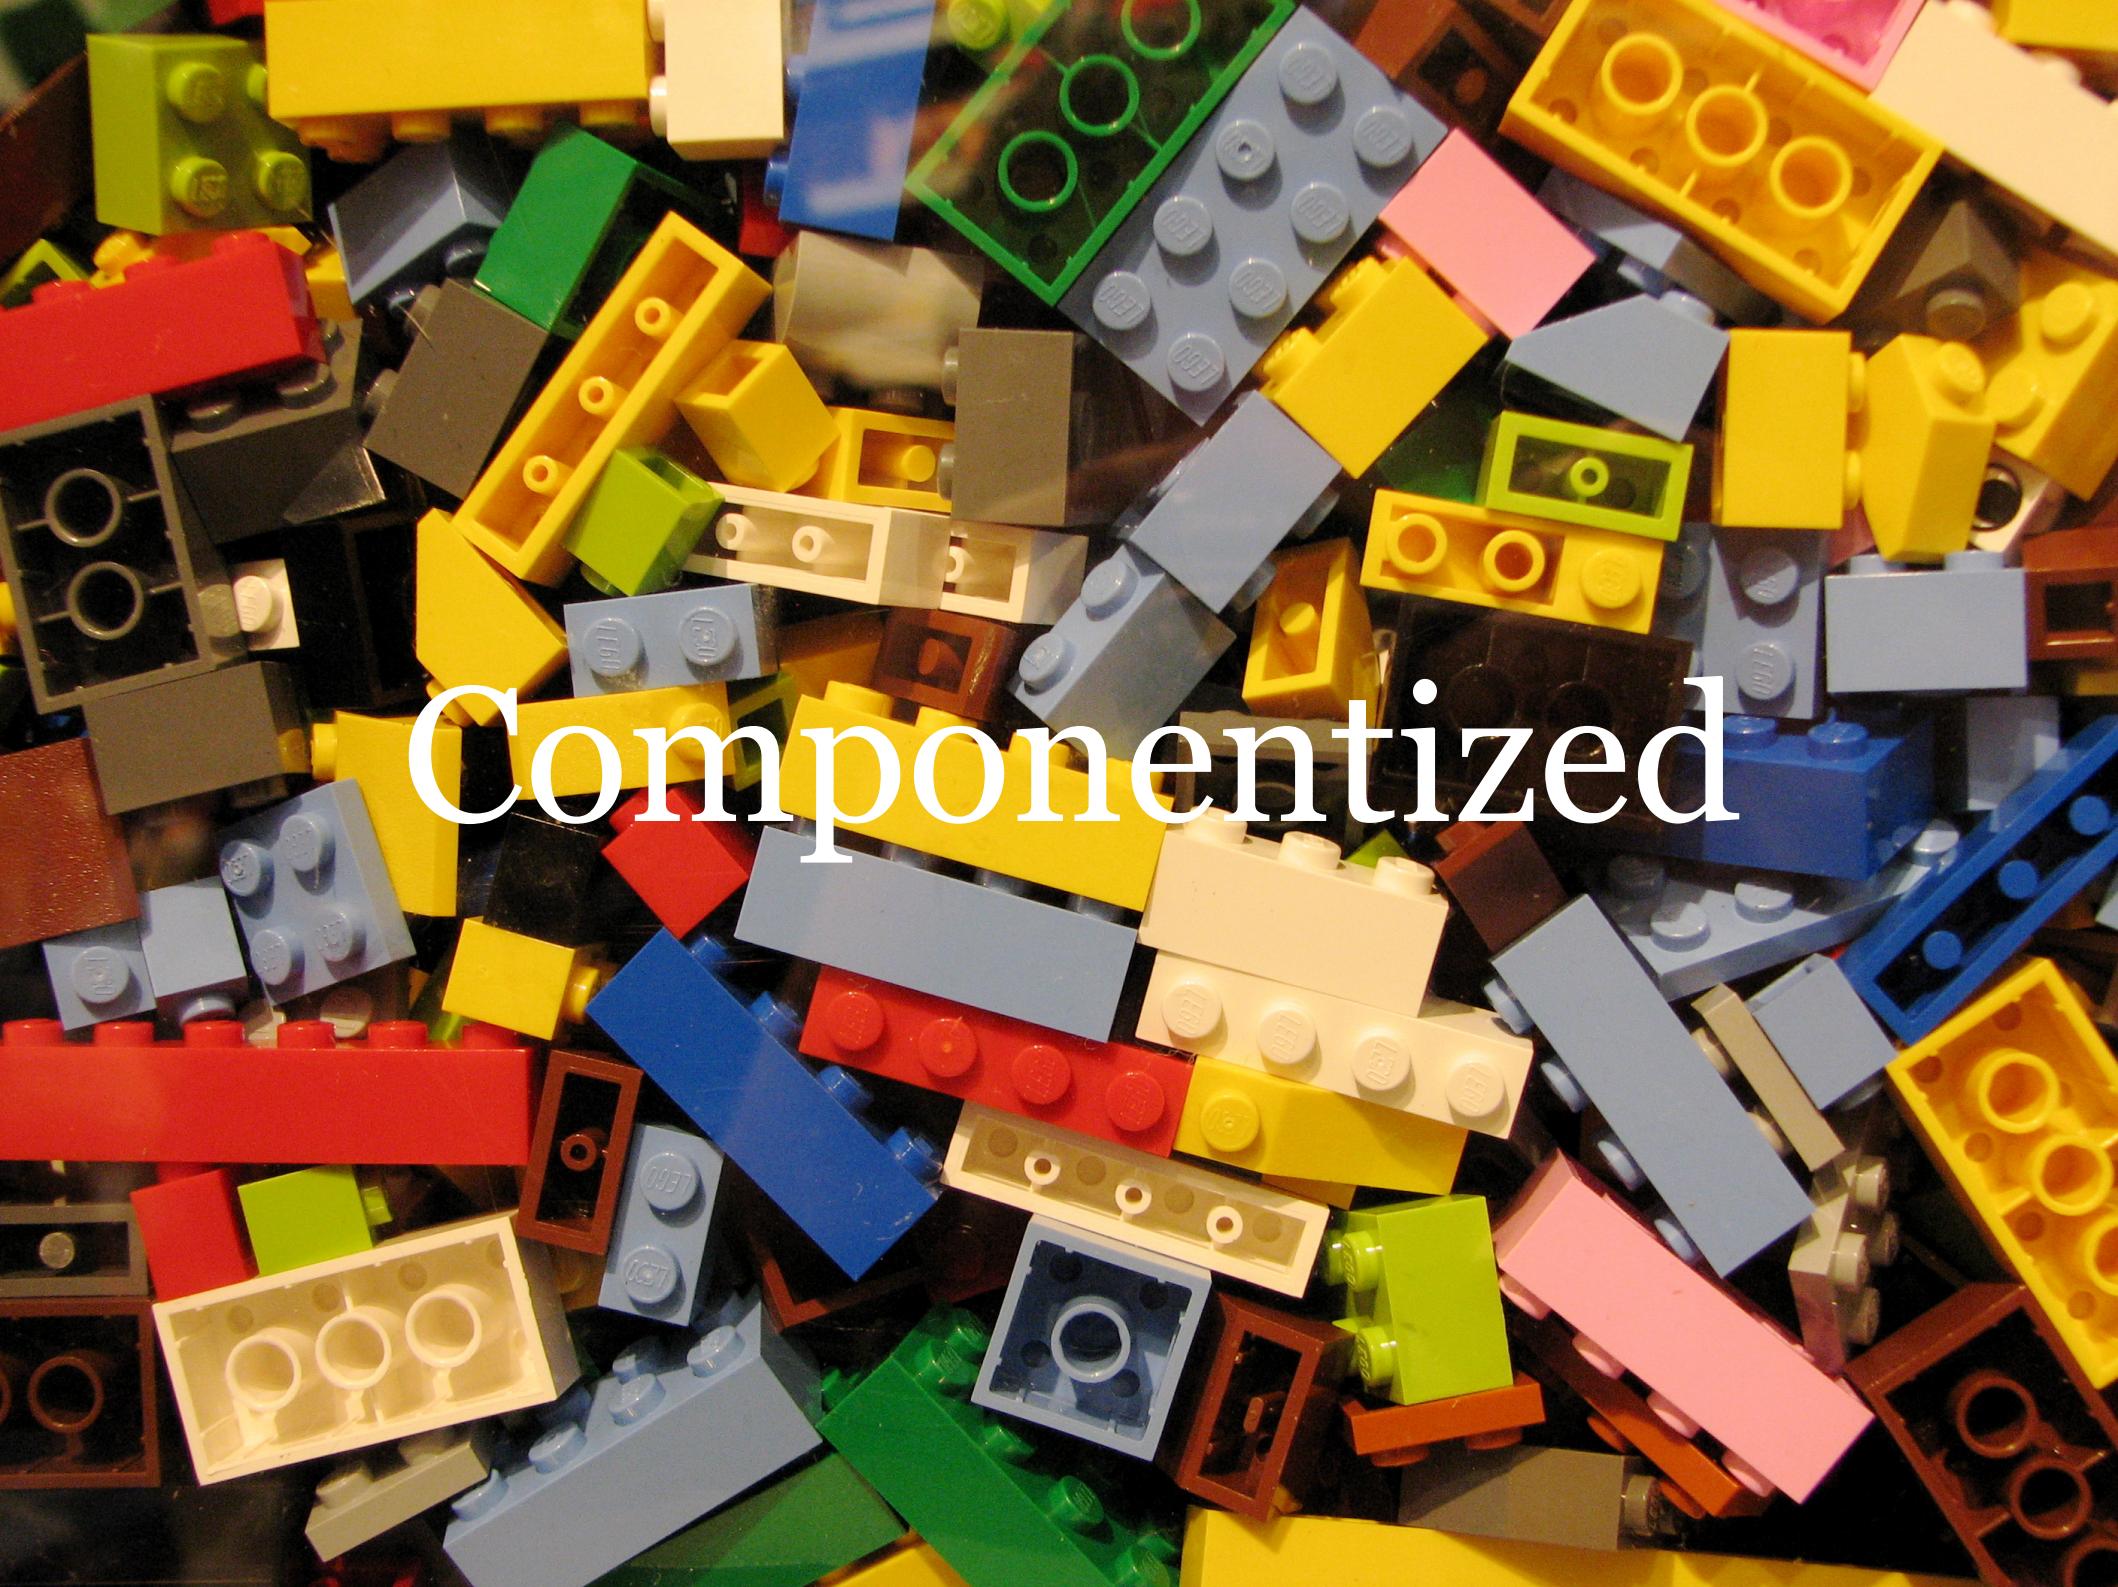

# How Do We Scale?

What Approach is Required  
for Large Scale Collaboration  
On Data and Content  
“Development”?

# Borrow from Free/Open Source

Develop a model that is:

Incremental  
Collaborative  
Decentralised  
Componentised

A large pile of colorful LEGO bricks of various shapes and colors, including yellow, blue, red, green, and grey, scattered across a dark surface.

Componentized

We Can Only Handle  
So Much  
Complexity

# Create and Share Data Packages

Developing a “Debian”  
of Data

18,000 Packages  
Maintained by 100s of people

The same is possible for data

Componentization allows us to scale  
Openness allows us to put  
Humpty-Dumpty back together again

# Community Driven

To Many Eyes All Bugs  
Are Shallow

Collaborative developments  
Can yield large benefits

# OSM and Haiti MP Expenses

Postboxes to Galaxies,  
Biodiversity to Dictionaries

# Developing the Tools

About

Unlocking innovation

Working with UK Public  
Sector information and data

Advised by Sir Tim Berners-Lee and Professor Nigel Shadbolt and others, government are opening up data for reuse. This site seeks to give a way into the wealth of government data and is under constant development. We want to work with you to make it better.

We're very aware that there are more people like you outside of government who have the skills and abilities to make wonderful things out of public data. These are our first steps in building a collaborative relationship with you.

What is the  
Semantic  
Web?

Combining different data sources has never been easy but the Semantic Web will enable data to be joined easily across boundaries.

## Welcome to CKAN

CKAN is a registry of [open data and content](#) packages. CKAN makes it easy to **find, share and reuse open content and data**, especially in ways that are machine automatable.

**936 registered packages available.**

E.g. 'geo', 'shakespeare', 'science'

Filters:  open license  downloadable
